

#1 Doctor Recommended Eye, Lid and Facial Cleanser

HOW IT'S MADE

Cliradex[®]

Naturally fresh, healthy eyes

THE PAINSTAKING PROCESS OF MAKING 4-TERPINEOL (T40)

The Tea Tree

- 1 Raw Melaleuca Alternifolia plant material. It normally takes one ton of plant material to create just one gallon of essential oil.

Steam Distillation

- 2 Steam distillation process extracts the essential tea tree oil.

Essential Oils

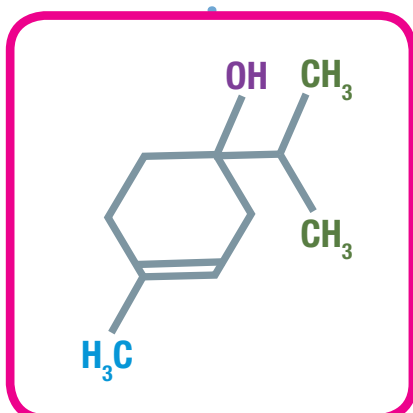

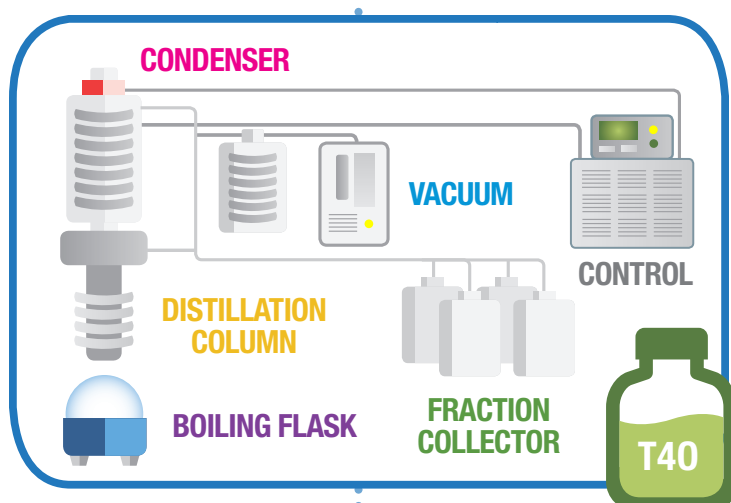

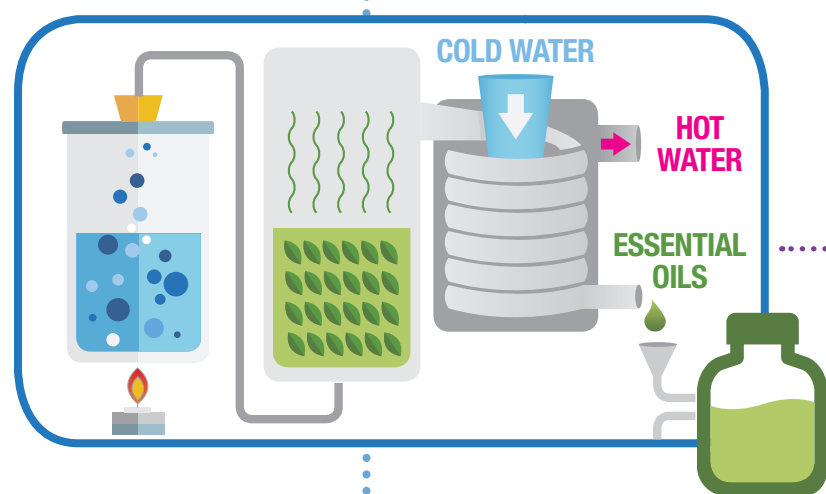

Essential oils have been called the “the life blood of the plant”. They are “essential” because they make up the immune system and are vital to the plants overall health and well-being. They are made up of small molecules that can pass through cell walls. Due to these special properties, they have been harnessed and used for promoting health in humans dating back to the ancient Egyptians and Greeks.

Fractional Vacuum Distillation

- 4 An advanced technique that further separates the TTO into its component parts, or fractions, thus safely isolating the 4-Terpineol and preserving its integrity.

Effective & Non-toxic

- 5 4-Terpineol provides all the effective and desired natural properties, without the toxicity, of traditional tea tree oil.

Cliradex

The #1 Doctor recommended treatment for Blepharitis, Demodex, Dry Eye and Ocular Rosacea.
